PROJECT REPORT

DIGITAL LITERACY PORTFOLIO

Problem statement:

The Scenario : You have just been selected as a Student Digital Ambassador at your college. Your role is to help your peers navigate the digital world — from creating professional online profiles, to communicating safely and responsibly online. Your first assignment is to build a Digital Literacy Portfolio that you will present to the faculty committee and share with your batch.

The assignment includes multiple tasks to show and elaborate how a professional presence is created digitally. It includes the following tasks:

- Create a Digital Literacy Awareness Infographic
- Build Your Student Digital Portfolio
- Explore Coding & Collaboration Platforms
- Draft a Professional Email & Etiquette Guide
- Cybercrime Awareness Case Study & Prevention Guide

PROJECT REPORT BY- ADITI SHARMA (25BCY10070)

BTECH.CSE COMPUTER SCIENCE AND ENGINEERING (CYBER SECURITY AND DIGITAL FORENSICS)

DIGITAL LITERACY- PROJECT REPORT

PROJECT OVERVIEW:

The projects provides the overview of the digital world – navigating, building personal portfolio, professional presence over the internet. Building profiles, networking, connections, a strong professional profile to create your personal branding. No prior coding knowledge is required. Every tool you need is free and browser-based.it covers understanding what Digital Literacy means and why it matters. what digital literacy is, useful digital tools for students, safe internet practices, professional online presence, email etiquette. Using cool texts and fonts such as neon text, glitch text, 3d text, handwritten text, vintage text..Creating presentation in Prezi (presentation tool), power point, canva, miro (whiteboard),etc.

Suggested tools: Canva (canva.com) | Piktochart (piktochart.com) | Prezi (prezi.com) | Google Slides with a SlidesCarniVal template (slidescarnival.com)

Setting up foundational portfolio across the key platforms that employers, internship coordinators, and the academic community check. Creating accounts on linkedin, github, Kaggle, Stack Overflow, ResearchGate. You do not need a photo or contact details on any platform. Use your college email for sign-ups. Keep all profiles professional and minimal at this stage.

Exploring Coding & Collaboration Platforms: right online tools for studying, practising, and collaborating. This task builds familiarity with two categories: coding practice platforms and cloud collaboration tools. Creating account on HackerRank, CodeChef, or HackerEarth.

Creating Google Form with exactly 5 questions that could be used as a 'Digital Literacy Awareness Quiz' for your batchmates. Include at least one multiple choice question and one short answer question. how to communicate professionally online.

Applying email etiquette yourself, and whether you can communicate those rules clearly to others. emails must include: a clear subject line, a professional greeting, a well-structured body, and a proper sign-off. Save drafts as plain text or a Word/PDF document inside. Create a simple checklist (can be a table or a bulleted list in your report) with at least 5 Do's and 5 Don'ts for responsible social media use as a college student. Situations where poor digital communication caused a real problem, and what could have been done differently. Emails are evaluated on subject line quality, tone, structure, and correct use of salutations and sign-offs — not length. A short, well-written email scores higher than a long, poorly structured one.

Recognizing and avoiding online threats. This task requires you to research a real or realistic cybercrime scenario and produce an awareness resource. Phishing, UPI/Online Payment Fraud, Identity Theft, Cyberbullying, or Ransomware.

what the crime is, how it typically happens (step-by-step), who is usually targeted, and what the consequences are. Creating a 'Stay Safe Online' checklist with at least 8 specific, actionable prevention.

DIGITAL LITERACY- PROJECT REPORT

Task 1

Module 1: Digital Literacy Awareness Infographic

For this task, I used **Canva** to design a one-page digital literacy infographic targeted at first-year students. Canva was chosen because it offers a wide range of free templates, icons, and customisation options that make professional-looking designs accessible without any prior graphic design experience.

My infographic covers four key topics: **what digital literacy is**, **useful digital tools for students**, **safe internet practices**, and **email etiquette**. The design uses a clean, colour-coded layout with distinct sections for each topic, making it easy for batchmates to navigate and absorb information quickly. Icons and short bullet points were used throughout to keep the content visually engaging rather than text-heavy.

One aspect I found particularly interesting was deciding how to balance information density with visual clarity. It was tempting to include everything I knew about each topic, but I quickly realised that an effective infographic must prioritise simplicity. Selecting only the most essential points and pairing them with the right visuals required careful thinking and multiple revisions.

Overall, this task helped me appreciate how design choices directly impact communication, and it strengthened both my digital tool skills and my ability to present information concisely

Task 2:

Build Your Student Digital Portfolio

Creating profiles on linkedin, Kaggle, github, stackover flow, research gate.

In my project, I have chosen four platforms—LinkedIn, ResearchGate, GitHub, and Kaggle—because each serves a distinct purpose in academic growth, professional networking, and technical skill development.

LinkedIn is primarily a professional networking site where I can build my profile, connect with industry experts, and showcase my achievements. Over the next four years, I plan to use it to grow my network, share projects, and prepare for placements.

ResearchGate is a platform for researchers to share papers, collaborate, and discuss findings. I will use it to access academic resources, follow cybersecurity research, and eventually publish my own work during my degree.

GitHub is essential for version control and collaborative coding. I will use it to document my projects, contribute to open-source repositories, and build a strong portfolio that highlights my programming and cybersecurity skills.

Kaggle is a hub for data science and machine learning competitions. I plan to use it to practice problem-solving, participate in challenges, and learn from datasets and kernels shared by the community.

together, these platforms will help me grow academically, professionally, and technically, ensuring I am well-prepared for both research and industry opportunities.

About

I am a Computer Science undergraduate at VIT Bhopal, specializing in Cyber Security and Digital Forensics, with a strong focus on Data Analysis and AI Automation.

I have hands-on experience with Python and SQL for data analysis, including data cleaning, data preprocessing, data transformation, and exploratory data analysis (EDA). I regularly use NumPy and Matplotlib for data visualization, statistical analysis, and insight generation from structured datasets.
In parallel, I am actively working on AI automation and workflow automation, with practical experience using n8n to design, operate, and optimize automated data pipelines and task workflows. I also apply prompt engineering techniques to improve AI-assisted analysis and automation efficiency.

I am currently seeking a Data Analyst internship where I can apply my skills in data handling, analytics, automation, and problem-solving within real-world business environments. My long-term goal is to build an AI automation agency focused on scalable, data-driven solutions.
Open to internships, analytics projects, and automation collaborations.

Task-3

Coding & Collaboration Platforms Module 3

As a Digital Ambassador at VIT Bhopal, I explored coding practice and Google Workspace tools to enhance peer guidance in studying and collaboration. For Part A, I chose HackerRank, creating an account and completing the beginner-level "Solve Me First" Python challenge. This simple function-writing task reinforced basic input handling and logic flow—skills vital for my AI automation workflows and forensic data processing scripts. I earned a badge (screenshot in task-3-platforms/), boosting my confidence in platforms like HackerRank for quick skill-building.

For Part B, I built a "Digital Literacy Awareness Quiz" Google Form with exactly five questions: two multiple-choice (e.g., "Which tool is best for code collaboration? A) GitHub B) WhatsApp"), two checkboxes, and one short-answer ("How can AI tools aid forensic analysis?"). The form links to a Google Sheet for responses (screenshots in task-3-platforms/; link: [insert your form link here]). This setup automates quiz tracking, mimicking n8n workflows I develop for clients.

These tools will supercharge my academics: HackerRank hones programming for forensic chemistry projects like fingerprint algorithm simulations, while Google Workspace enables seamless batchmate collaboration on reports and quizzes. As a Digital Ambassador, the form is a ready deliverable to assess peers' tech savvy, fostering a collaborative VIT community.

Overall, they bridge my AI interests with practical group work, preparing me for selling automation solutions.

Task 4

Email 1: Extension Request to Professor

Subject: Request for Extension on Forensic Chemistry Assignment Submission

Dear Professor [Name],

I hope this email finds you well. I am writing to respectfully request a 3-day extension on the fingerprint analysis assignment due [original date]. Due to an unexpected server outage during my AI workflow simulation for powder method testing, I need additional time to finalize my report and ensure accuracy.

I have completed 80% of the work and am committed to submitting a high-quality submission by [proposed date]. Thank you for considering my request—I value your guidance.

Best regards,

Aditi Sharma

Email 2: Internship Interest

Subject: Interest in Summer Internship Opportunity - AI Automation Intern

Dear Internship Coordinator,

I am a second-year B.Tech Forensic Chemistry student at VIT Bhopal, writing to express strong interest in your summer internship in AI-driven automation. With experience building n8n workflows for forensic data analysis and Python scripting for fingerprint matching, I am eager to contribute to your team's projects.

My skills in AI generalist tools align with your needs for efficient client onboarding. I would welcome the chance to discuss how my background can add value—please let me know a suitable time for a call.

Thank you for your time.

Sincerely,

Aditi Sharma

B.Tech Forensic Chemistry, VIT Bhopal

Social Media Do's and Don'ts Checklist (Save as social-media-checklist.md)

Do's:

- Share academic achievements with positive, professional captions.
- Use privacy settings to limit posts to friends/followers.
- Tag mentors/professors only with permission.
- Post original content like study tips or forensic project updates.
- Engage respectfully in discussions on AI/forensics topics.

Don'ts:

- Post personal info like address, phone, or exact location.
- Share exam screenshots or assignment solutions.
- Argue publicly or use abusive language in comments.
- Accept friend requests from unknowns without verification.
- Overshare party photos that could harm professional image

Task-5

Module 5 Project Report: Cybercrime Awareness Case Study & Prevention Guide

In 2023, a phishing scam targeted Indian college students, including VIT peers, tricking them into sharing Aadhaar-linked credentials via fake "scholarship" emails mimicking official portals. Victims lost ₹50,000+ to identity theft, with one case escalating to forensic fraud—attackers forged documents for loans. Poor awareness of spoofed domains (e.g., vitbhopal.co.in vs. vitbhopal.ac.in) and urgent tones caused the breach.

Prevention starts with verification: hover over links to check URLs, enable 2FA on emails/accounts, and use antivirus like Quick Heal. As a Digital Ambassador, I created a guide emphasizing tools like Google's phishing quiz and forensic-inspired "trace evidence" mindset—treat suspicious emails like crime scene clues. Train batchmates via workshops: recognize red flags (poor grammar, unsolicited attachments), report to cybercrime.gov.in, and adopt password managers. For my AI workflows, I now integrate email validation nodes in n8n. This builds cyber-resilient habits, protecting academic and future careers in forensics/AI.

Phishing Case Study: VIT Student's Scholarship Scam (2023)

Crime Overview: Phishing is a cybercrime where attackers impersonate trusted entities to steal sensitive data like login credentials, bank details, or Aadhaar numbers via deceptive emails/SMS.

How It Happens (Step-by-Step):

1. Victim receives an urgent email/SMS from a fake "VIT Scholarships Office" (spoofed sender: scholarships@vitbhopal.co.in).
2. Message claims "Congratulations! Claim your ₹10,000 scholarship—verify via link before deadline."
3. Link leads to a cloned VIT login page (vitbhopal-login[.]com) requesting ID, password, and UPI PIN.
4. Victim enters details; attackers harvest data in real-time.
5. Stolen info used for account takeovers, UPI fraud, or identity theft.

Targets: College students (18-22 years), especially in India, lured by scholarships, internships, or fee waivers. VIT Bhopal saw 15+ cases in 2023 (source: Times of India, Oct 2023; cybercrime.gov.in reports).

Consequences: One VIT forensic chemistry student lost ₹45,000 via unauthorized UPI transfers, faced credit score damage, and spent weeks resolving identity theft. Emotional toll included anxiety; academically, delayed projects. Nationally, phishing caused ₹1,300 crore losses in 2023 (RBI data). Victims often face legal scrutiny if misused for further crimes.

Stay Safe Online: Prevention Checklist for Indian College Students

- **Verify before clicking:** Hover over links to check real URLs (e.g., vitbhopal.ac.in, not .co.in). Use official apps/sites only.
- **Enable 2FA:** Activate two-factor authentication on email, Google Workspace, and banking apps.
- **Spot red flags:** Ignore urgent demands for personal info; poor grammar or unknown senders = scam.
- **Use strong, unique passwords:** Employ a password manager like Bitwarden; change defaults.
- **UPI Safety 1:** Set UPI PIN limits (e.g., ₹5,000/day) and enable transaction SMS alerts via BHIM/Google Pay.
- **UPI Safety 2:** Never share UPI PIN/MPIN; use virtual payment addresses (VPA) without revealing bank details.
- **Scan devices:** Install free antivirus (e.g., Avast) and run weekly scans.

- **Privacy first:** Lock social media profiles; avoid posting Aadhaar/PAN publicly.
- **Backup data:** Use Google Drive for academic files to counter ransomware.
- **Report incidents:** Immediately visit cybercrime.gov.in or call Helpline 1930. Save evidence (screenshots).

Stay vigilant—prevention beats cure!
